

CleanSafe®

General Terms Cleaning and Protection

CleanSafe® is, as known, a very advanced high-tech cleaning- and protection product, that has reached its current state after many years of intensive development efforts.

Recently we experience that CleanSafe® sometimes is compared to general cleaning and protection products. This of course does not do right to this fantastic product.

Therefore hereby a number of terms and notes so that you can make a well-balanced decision.

DIRT can:

- be loosened (in a fully natural way) and removed (CleanSafe®) OR
- be moved and rubbed in (products with solvents and/or silicones)

(CleanSafe® has no influence on the structure of the material. Dirt can therefore never be rubbed in – this is contrary to most other products)

COATINGS

Almost all electronic (monitors / screens / copiers / television / CD etc.) equipment has coated surfaces. Coatings are applied during the production process for amongst other the following reasons: anti-reflection; conductivity; limiting radiation; enhancing contrast etc. The use of coatings (cheaper than changing the base material) increases significantly.

(CleanSafe® is completely safe for all coatings)

SOLVENTS and the ENVIRONMENT

Coatings are damaged by solvents, sometimes immediately, sometimes on the longer term. Cleaning products with solvents should be kept away from all coated surfaces (not only glass!).

It is legally required to declare the use of solvents on a product, but it does not harm to verify this point. The effects can be disastrous! Furthermore it is unsafe and it harms the environment.

(CleanSafe® does not contain any solvent and is user and environment friendly)

ANTI-STATIC

Most cleaners remove some form static from surfaces. The grounding effect of the person treating the subject is here a significant factor.

Very few cleaners have a low conductivity which is a key factor in removing static. CleanSafe® 's conductivity factor is lowest in the industry!

In addition CleanSafe® provides an anti-static layer which prevents the build-up of static, after the treatment. This layer is unique in the industry.

CleanSafe® the only, real, alternative

Convince yourself

Try it and.....See, Hear and Feel the difference!!
